Falls cause 85% of seniors' injury-related hospitalizations

Over 1/3 of seniors are admitted to long term care facilities from falls that require hospitalization

Falls can be prevented at home and we can help!

Are you concerned that someone you care about is:

- experiencing a change in mobility?
- at risk of falling?
- experiencing memory difficulties or other cognitive changes?
- being discharged from hospital and is in need of support?
- having difficulty managing their housekeeping, grocery shopping, or other household tasks?
- not able to safely prepare meals?

Age in Place, Safely.

“Aging in Place means having access to services, and the health and social supports you need to live safely and independently in your home or your community for as long as you wish or are able.”

-The Forum of Federal/Provincial/ Territorial Ministers Responsible for Seniors.

Occupational Therapy Assessments

To identify independent living safety risk factors and prevent future hospital admissions, our occupational therapists conduct in-home cognitive, physical and functional screenings. These results guide our residential accessibility assessment and produce a report which includes a *SAFE Living Manitoba Risk Rating Score*.

Recommendations regarding appropriate residential options, home modifications, mobility equipment, support services, and community resources are provided to facilitate safe community living.

COMMUNITY PARTNERS

We connect with local home healthcare product providers and support services to assist with the implementation of our recommendations.

By partnering with home renovation Certified Aging-in-Place Specialists (CAPS), our inclusive design consultants help create safe, beautiful, and accessible spaces.
